Rathbone Greenbank Defensive Growth Portfolio

Task Force on Climate-Related Financial Disclosures Product Report

June 2026

RATHBONES
ASSET MANAGEMENT

Your portfolio's impact on climate change

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones' approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - Climate-report. A glossary of terms used in this document can be found here - Glossary. The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Weighted Average Carbon Intensity (WACI)

The carbon intensity of the fund weighted by the amount invested in each company, which serve as a measurement of emissions performance of the fund (for Scope 1+ Scope 2). This is calculated in tonnes CO_2e divided by £M sales.

2025	2024	2023
59.3	51.9	66.8
tonnes CO_2e/£M sales	**tonnes CO_2e/£M sales**	**tonnes CO_2e/£M sales**
Data coverage 66%	Data coverage 66%	Data coverage 67%

Fund Manager's Commentary: The fund's weighted average carbon intensity increased in 2025 compared with 2024 but remained below the 2023 level. This metric can move due to changes in portfolio holdings, company emissions and company revenues, and should be read alongside the 66% data coverage.

RATHBONES ASSET MANAGEMENT

Your portfolio's impact on climate change (cont'd)

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones' approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - Climate-report. A glossary of terms used in this document can be found here - Glossary. The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Total Carbon Footprint

The total carbon emissions of the fund divided by the total value of the fund. This is calculated in tonnes CO2e divided per £M invested.

2025	2024	2023
12.6	11.2	18.4
tonnes CO_2e/£M sales	**tonnes CO_2e/£M sales**	**tonnes CO_2e/£M sales**
Data coverage 61%	Data coverage 66%	Data coverage 54%

Fund Manager's Commentary: The fund's total carbon footprint increased in 2025 compared with 2024 although it remained below the 2023 level. The figure should be considered alongside the lower data coverage of 61%, which may affect year-on-year comparability.

Your portfolio's impact on climate change (cont'd)

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones' approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - Climate-report. A glossary of terms used in this document can be found here - Glossary. The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Scope 1 and 2 Greenhouse Gas Emissions

The sum of the total operational emissions from securities within the fund. This is calculated in tonnes CO_2e

2025	2024	2023
2,286	1,888	2,355
tonnes CO_2e	**tonnes CO_2e**	**tonnes CO_2e**
Data coverage 61%	Data coverage 66%	Data coverage 54%

Fund Manager's Commentary: Scope 1 and 2 emissions increased in 2025 compared with 2024 but were still slightly below the 2023 level. These figures reflect reported operational emissions from companies held in the fund and should be viewed in the context of 61% data coverage.

Your portfolio's impact on climate change (cont'd)

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones' approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - Climate-report. A glossary of terms used in this document can be found here - Glossary. The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Scope 3 Greenhouse Gas Emissions

The total indirect emissions that the fund is responsible for, within its value chain, including: employee travel, waste disposal, leased assets and franchises.

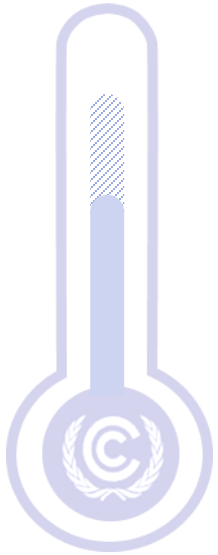
2025	2024	2023
22,013	17,755	14,363
tonnes CO_2e	tonnes CO_2e	tonnes CO_2e
Data coverage 61%	Data coverage 66%	Data coverage 54%

Fund Manager's Commentary: Scope 3 emissions increased in 2025, continuing the upward trend from 2023. Scope 3 data remains less mature, so changes may reflect both portfolio emissions and improvements or changes in company reporting.

RATHBONES ASSET MANAGEMENT

Implied temperature rise

The Implied Temperature Rise (ITR) is a forward- looking metric which provides an indication of how well the fund aligns with the ambitions of the Paris Agreement calculated in degrees Celsius.



2.0°C ITR Figure

Greenbank Defensive Growth

1.5 - 2°C

Paris Agreement target

How do these scenarios align to Paris Agreement commitments?

The Paris Agreement's central aim is to strengthen the global response to the threat of climate change by keeping the global temperature rise this century to well below 2 degrees Celsius above pre-industrial levels.

Scenario analysis

Climate value-at-risk attempts to assess the potential financial loss or gain from the fund as a result of climate change, including the impact of: climate policy; new technology opportunities; physical risks.

The 3 scenarios of climate change which we have assessed shows how a global temperature increase of between 1.5^{0}C and 3^{0}C by 2100 may impact the fund. We calculate these using the Network for Greening the Financial System (NGFS) REMIND model, accessed through MSCI.

	Orderly Transition	Disorderly Transition	Hot House World
Global temperature rise	+ 1.5C	+ 1.5C	+ 3.0C
Application of climate policies	Climate policies are introduced and gradually become more stringent	Climate policies are delayed or inconsistent across countries	Global efforts are insufficient to halt significant global warming
Your portfolio Climate value at risk (Data coverage: 61%)	**2025** -2.1%	**2025** -2.4%	**2025** -1.9%
Climate scenarios Climate scenario analysis helps us understand the implications of possible climate scenarios on our investment portfolio, and the resilience of our investment strategies in the transition to a net zero economy. Our approach to scenario analysis involves assessing the exposure of our equity and corporate bonds holdings by applying MSCI's Climate Value-at-Risk (Climate VaR) methodology.	Orderly transition scenarios assume climate scenarios assume climate policies are introduced early and become gradually more stringent. Both physical and transition risks are relatively subdued	Disorderly scenarios explore higher transition risk due to policies being delayed or divergent across countries and sectors. Carbon prices are typically higher for a given temperature outcome	Hot house world scenarios assume that some climate policies are implemented in some jurisdictions, but global efforts are insufficient to halt significant global warming. Critical temperature thresholds are exceeded, leading to severe physical risks and irreversible impacts like sea-level rise.

Fund Manager's Commentary: The fund shows a modest negative climate value-at-risk across all three climate scenarios, with the largest estimated impact under a disorderly transition. Key drivers include transition risks from policy and technology changes, and physical risks under a hotter world, partly offset by the fund's exposure to companies supporting the low-carbon transition. The analysis is based on MSCI's climate scenario methodology and has 61% data coverage, so the results should be treated as an estimate rather than a precise forecast.
