

Rathbone Multi-Asset Enhanced Growth Portfolio

Task Force on Climate-Related Financial Disclosures
Product Report

June 2026

Your portfolio’s impact on climate change

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones’ approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - [Climate-report](#). A glossary of terms used in this document can be found here - [Glossary](#). The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Weighted Average Carbon Intensity (WACI)

The carbon intensity of the fund weighted by the amount invested in each company, which serve as a measurement of emissions performance of the fund (for Scope 1+ Scope 2). This is calculated in tonnes CO₂e divided by £M sales.

2025	2024	2023
125.1	99.1	116.8
tonnes CO ₂ e/£M sales	tonnes CO ₂ e/£M sales	tonnes CO ₂ e/£M sales
Data coverage 97%	Data coverage 99%	Data coverage 98%

Fund Manager’s Commentary: Carbon intensity for the fund increased in 2025. This reflects changes in portfolio positioning and the emissions intensity of companies held within the fund. Movements can also be influenced by changes in company revenues and reported emissions.

Your portfolio’s impact on climate change (cont’d)

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones’ approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - [Climate-report](#). A glossary of terms used in this document can be found here - [Glossary](#). The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Total Carbon Footprint

The total carbon emissions of the fund divided by the total value of the fund. This is calculated in tonnes CO2e divided per £M invested.

2025	2024	2023
35.4	27.1	32.1
tonnes CO ₂ e/£M sales	tonnes CO ₂ e/£M sales	tonnes CO ₂ e/£M sales
Data coverage 94%	Data coverage 97%	Data coverage 93%

Fund Manager’s Commentary: The total carbon footprint increased in 2025. This was driven by higher emissions from underlying holdings and changes in portfolio composition. While data coverage remains high, year-on-year comparisons can still be affected by changes in underlying data..

Your portfolio’s impact on climate change (cont’d)

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones’ approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - [Climate-report](#). A glossary of terms used in this document can be found here - [Glossary](#). The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Scope 1 and 2 Greenhouse Gas Emissions

The sum of the total operational emissions from securities within the fund. This is calculated in tonnes CO₂e

2025	2024	2023
16,769	11,448	10,143
tonnes CO ₂ e	tonnes CO ₂ e	tonnes CO ₂ e
Data coverage 94%	Data coverage 97%	Data coverage 93%

Fund Manager’s Commentary: Scope 1 and 2 emissions increased in 2025. This reflects higher direct and energy-related emissions reported by companies in the portfolio, as well as increased exposure to more carbon-intensive businesses.

Your portfolio’s impact on climate change (cont’d)

The purpose of this report is to provide you with a summary of the possible impact of climate change, both the risks and opportunities, on the securities held within the fund. Reporting period 1st January 2025 to 31st December 2025. Calculation date 31st December 2025.

Rathbones’ approach to governance, strategy, risk management, and Group/Entity-level metrics can be found here - [Climate-report](#). A glossary of terms used in this document can be found here - [Glossary](#). The value of investments may increase or decrease due to the impact of climate change. Rathbones believes that there is sufficient data coverage to rely on these figures unless stated otherwise.

Scope 3 Greenhouse Gas Emissions

The total indirect emissions that the fund is responsible for, within its value chain, including: employee travel, waste disposal, leased assets and franchises.

2025	2024	2023
177,877	131,732	101,193
tonnes CO ₂ e	tonnes CO ₂ e	tonnes CO ₂ e
Data coverage 94%	Data coverage 97%	Data coverage 93%

Fund Manager’s Commentary: Scope 3 emissions increased in 2025. These emissions relate to companies’ wider value chains and are more difficult to measure, meaning figures may remain volatile as reporting standards and data quality continue to improve.

Implied temperature rise

The Implied Temperature Rise (ITR) is a forward- looking metric which provides an indication of how well the fund aligns with the ambitions of the Paris Agreement calculated in degrees Celsius.

2.5°C ITR Figure

Multi-Asset Enhanced Growth

1.5 - 2°C

Paris Agreement target

How do these scenarios align to Paris Agreement commitments?

The Paris Agreement's central aim is to strengthen the global response to the threat of climate change by keeping the global temperature rise this century to well below 2 degrees Celsius above pre-industrial levels.

Scenario analysis

Climate value-at-risk attempts to assess the potential financial loss or gain from the fund as a result of climate change, including the impact of: climate policy; new technology opportunities; physical risks.

The 3 scenarios of climate change which we have assessed shows how a global temperature increase of between 1.5°C and 3°C by 2100 may impact the fund. We calculate these using the Network for Greening the Financial System (NGFS) REMIND model, accessed through MSCI.

	Orderly Transition	Disorderly Transition	Hot House World
Global temperature rise	+ 1.5C	+ 1.5C	+ 3.0C
Application of climate policies	Climate policies are introduced and gradually become more stringent	Climate policies are delayed or inconsistent across countries	Global efforts are insufficient to halt significant global warming
Your portfolio	2025	2025	2025
Climate value at risk (Data coverage: 94%)	-5.6%	-6.5%	-2.5%
Climate scenarios Climate scenario analysis helps us understand the implications of possible climate scenarios on our investment portfolio, and the resilience of our investment strategies in the transition to a net zero economy. Our approach to scenario analysis involves assessing the exposure of our equity and corporate bonds holdings by applying MSCI's Climate Value-at-Risk (Climate VaR) methodology.	Orderly transition scenarios assume climate scenarios assume climate policies are introduced early and become gradually more stringent. Both physical and transition risks are relatively subdued	Disorderly scenarios explore higher transition risk due to policies being delayed or divergent across countries and sectors. Carbon prices are typically higher for a given temperature outcome	Hot house world scenarios assume that some climate policies are implemented in some jurisdictions, but global efforts are insufficient to halt significant global warming. Critical temperature thresholds are exceeded, leading to severe physical risks and irreversible impacts like sea-level rise.

Fund Manager’s Commentary: The fund has a negative climate value-at-risk across all scenarios, with the largest impact in a disorderly transition where climate policies are delayed. The key drivers are exposure to sectors sensitive to policy changes and physical climate risks. This is partly offset by investments in companies expected to benefit from the transition to a lower-carbon economy.

Additional information

The information in this report is provided for information only and should not be taken as financial advice or a recommendation.

The value of investments and the income from them may go down as well as up and you may not get back your original investment. Past performance should not be seen as an indication of future performance.
